The Future of Passport & ID Security is Decentralised.

This document you’re holding is an example of how VeriDoc Global will help governments and businesses all around the world to eliminate document forgeries, identity theft and counterfeits.

By scanning the QR code on these example passports you are able to verify then compare this to the original document on the blockchain.

SOME KEY FEATURES TO NOTE

**REDUCTION IN COSTS**
Governments and businesses save time and money lost each year due to document fraud.

**FOREFRONT OF DOCUMENT SECURITY**
Data is immutable on blockchain and can’t be breached via an attack on a single server or database.

**INCREASED SAFETY**
Eliminates the ability for criminals and terrorists to create fake passports.

Our solution is finished, launched and blockchain ready. We have a library of APIs developed to integrate with businesses and governments, right now. Basically - we’re ready when you are.
